## FRONT MOUNTED INSTALATION

Minimum required axial offset towards the inside (when the base is concrete). If there is an insulation(or hollow) layer present, the distance must be increased accordingly, based on the thickness of that layer.

### Dimensions as required by the client

(A) = External Size A (Measure the Outer edge of the place you are going to mount)

(H) H = Balustrade system high

### System-calculated dimensions

(AB) = AB Size Balustrade

(E) E = Offset of the axis in which the anchors are drilled min. 55mm

(F) F = Gap Between wall and balustrade profile

(HB) HB = Timber height

(HW) HW = Timber wide

(W) = Width of profile SV75UF is 75mm

## BETWEEN WALLS

## NOT CONFINED BY WALLS

**NOTE:** IF the length of the balustrade is over 5000mm. 3mm thermal expansion joint must be anticipated for every next piece!

**WOOD**  
**OUTER CORNER**

**SV 75 UF**  
STANDARD INSTALLATION TYPES

**Dimensions as required by the client**

(A) = External Size A (Measure the Outer edge of the place you are going to mount)

(B) = External Size B (Measure the Outer edge of the place you are going to mount)

**System-calculated dimensions**

(AB) = AB Size Balustrade

(BB) = BB Size Balustrade

(APC) = APC Size Balustrade piece

(BPC) = BPC Size Balustrade piece

(OC) = Corner Size = 200mm

(F) F = Gap Between wall and balustrade profile

(W) = Width of profile SV75UF is 75mm

**NOTE:** Railing orders are executed according to the specified standard installation schemes. For any other requirements, please contact us regarding a custom order.

**NOTE:** IF the length of the balustrade is over 5000mm. 3mm thermal expansion joint must be anticipated for every next piece!

**NOTE:** IF the balustrade is not confined by walls AB and BB can be smaller, equal or greater than A and B
